## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

AActor	
AActivateWind . . . . .	5
ABall . . . . .	8
AChangeMaterialController . . . . .	12
AElevatorPlatform . . . . .	15
AOscillatingPlatform . . . . .	40
APlatform_Assist_Lift . . . . .	42
APlatform_Moving . . . . .	43
ASwitch . . . . .	47
AHideShowActorSwitch . . . . .	29
ALightSwitch . . . . .	33
ACharacter	
AGolfGameCharacter . . . . .	21
AGameModeBase	
AGolfGameGameModeBase . . . . .	27
ATriggerBox	
AElevatorTrigger . . . . .	17
AGolfGameTriggerBox . . . . .	28
AChangeDialogueTriggerBox . . . . .	10
AChangeTeleportToDialogue . . . . .	14
AGoalTriggerBox . . . . .	19
ALoadLevelTriggerBox . . . . .	37
AMusicChangeTriggerBox . . . . .	38
ANoTeleportingTriggerBox . . . . .	39
APlatformGravityTriggerBox . . . . .	45
APlayOnceSoundTriggerBox . . . . .	46
ASwitchTriggerBox . . . . .	49
AWindTriggerBox . . . . .	50
AGolfGameCharacter::FTouchData . . . . .	52
UActorComponent	
UGrabThrowComponent . . . . .	52
UUserDefinedEnum	
UMovementType . . . . .	56

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">AActivateWind</a>	This trigger is used to turn on and off the boolean in the wind trigger box that turns on and off the wind mechanic . . . . .	5
<a href="#">ABall</a>	The main ball in the game that the player can pick up, throw, summon, and teleport to . . . . .	8
<a href="#">AChangeDialogueTriggerBox</a>	When the player begins overlapping the ChangeDialogueTriggerBox, a new Sound Base is loaded into the audio component in the GolfGameCharacter and played. A delay can be set from the UE4 editor to postpone the playing of the new dialogue for a set number of seconds. The Sound Base will only be played once, then the DialoguePlayed boolean is set to true . . .	10
<a href="#">AChangeMaterialController</a>	Class controls the functionality behind the in-game switches. Toggles movement of associated elevator or moving platform, switches material of the controller to represent whether it is on or off, and toggles visibility of an associated light source. The switch can only be hit once per second by the ball as to not have false positive hits . . . . .	12
<a href="#">AChangeTeleportToDialogue</a>	Loads in new dialogue cue for when the player cannot teleport to the ball . . . . .	14
<a href="#">AElevatorPlatform</a>	Class communicates with the ElevatorTrigger trigger box that checks for the presence of the player character and moves up when the character enters the box. If the character exits the box before it reaches the target height, it moves back down to its original position. The associated static mesh, trigger box, and desired speed of movement and height of path can all be set inside the Unreal editor . . . . .	15
<a href="#">AElevatorTrigger</a>	Class responsible for communicating to the ElevatorPlatform whether the player character is present . . . . .	17
<a href="#">AGoalTriggerBox</a>	A trigger box that indicates if the Ball is in this trigger box or not . . . . .	19
<a href="#">AGolfGameCharacter</a>	GolfGameCharacter houses all functionality for a user to operate a player in-game . . . . .	21
<a href="#">AGolfGameModeBase</a>	Class generated by Ue4 when the project was created. Not directly utilized . . . . .	27
<a href="#">AGolfGameTriggerBox</a>	Abstract trigger box that calls a method when a specific actor begins or stops overlapping this trigger box . . . . .	28

<a href="#">AHideShowActorSwitch</a>	Switches a list of actors on and off . . . . .	29
<a href="#">ALightSwitch</a>	Switches a list of lights on and off . . . . .	33
<a href="#">ALoadLevelTriggerBox</a>	Trigger box that loads the next level when overlapped . . . . .	37
<a href="#">AMusicChangeTriggerBox</a>	When a specific actor begins to overlap MusicChangeTriggerBox, a selected Sound Base is loaded into the audio component for music in the GolfGameCharacter and played . . . . .	38
<a href="#">ANoTeleportingTriggerBox</a>	Disables the player from teleporting to the in game ball when it is in this trigger box . . . . .	39
<a href="#">AOscellatingPlatform</a>	Class creates a platform that moves back and forth on the x, y, or z axis. The associated static mesh, amount of pause time on either end of the path, the length of the path, speed of movement, initial direction, and axis of movement can all be set inside the Unreal editor . . . . .	40
<a href="#">APlatform_Assist_Lift</a>	Class representing a continually moving actor in-game, positioned next to the first platform on the final level. Moves up and down to move player back to starting platform . . . . .	42
<a href="#">APlatform_Moving</a>	Class represents the four moving platforms in the final level.They have the ability to move up / down, left /right, and side / side with a scale factor that effects how far they move . . . . .	43
<a href="#">APlatformGravityTriggerBox</a>	*Description: Upon a specific actor overlapping the triggerbox, the world gravity is set to a specified new gravity. The original gravity is then reset upon leaving the trigger box . . . . .	45
<a href="#">APlayOnceSoundTriggerBox</a>	Played a specific audio cue at the located specific one time when entering trigger box. The sound cannot be played again . . . . .	46
<a href="#">ASwitch</a>	Abstract class that switches actors on / off . . . . .	47
<a href="#">ASwitchTriggerBox</a>	Trigger box that turns a list of switches on/off . . . . .	49
<a href="#">AWindTriggerBox</a>	A trigger box that once the ball enters the overlap area, a force is added directly to the ball every .1 seconds resulting in a wind like mechanic . . . . .	50
<a href="#">AGolfGameCharacter::FTouchData</a>	. . . . .	52
<a href="#">UGrabThrowComponent</a>	This class is a component of the player character that allows the character to pick up, drop, and throw objects . . . . .	52
<a href="#">UMovementType</a>	Generated by Ue4, not directly utilized . . . . .	56

## Chapter 3

# Class Documentation

### 3.1 AActivateWind Class Reference

This trigger is used to turn on and off the boolean in the wind trigger box that turns on and off the wind mechanic.

```
#include <ActivateWind.h>
```

Inheritance diagram for AActivateWind:

#### Public Member Functions

- virtual void **Tick** (float DeltaTime) override
- void **OnOverlapBegin** (class UPrimitiveComponent \*OverlappedComp, class AActor \*OtherActor, class UPrimitiveComponent \*OtherComp, int32 OtherBodyIndex, bool bFromSweep, const FHitResult &SweepResult)

*Toggles properties when ball overlaps the actor. Sets CanBeHit to false. Toggles associated light's visibility, whether an associated platform is moving and whether an associated elevator can move.*

#### Public Attributes

- bool **ToggleTwoWindTriggerBoxes**  
*boolean to specify how many trigger boxes.*
- class UStaticMeshComponent \* **MyMesh**  
*Visible mesh representing the actor. Set in UE4 editor.*
- class UMaterial \* **OnMaterial**  
*Green material should be selected, represents the switch in the on state. Set in UE4 editor.*
- class UMaterial \* **OffMaterial**  
*Red material should be selected, represents the switch in the off state. Set in UE4 editor.*
- class UBoxComponent \* **MyBoxComponent**

*Box component for the overlapping section of the switch, where the ball will make contact and toggle switch properties.*

- bool **OnAtStart** = false
- class **AWindTriggerBox** \* **AssociatedWindBox**  
*The WindTriggerBox that needs to be turned on or off.*
- class **ABall** \* **Ball**  
*The ball that impact the switch to turn it on or off. Specific ball set in UE4 editor.*
- class **ARectLight** \* **AssociatedRectlight**  
*Selected light source to toggle visibility. Set in UE4 editor.*
- class **AAmbientSound** \* **WindSoundLeft**  
*left side wind sound*
- class **AAmbientSound** \* **WindSoundRight**  
*Right side wind sound.*
- **FTimerHandle** **MemberTimerHandle**  
*timer for the wind force.*

## Protected Member Functions

- virtual void **BeginPlay** () override

## Private Types

- enum **SwitchState** { **On**, **Off** }  
*enum for switches to internally represent whether they are in an on or off state.*

## Private Member Functions

- void **ToggleWind** ()  
*Called to turn the wind off if it is on.*
- void **ToggleWindOff** ()  
*Called to turn the wind on if it is off.*
- void **ToggleSpotlight** ()  
*Called to turn the the spotlight on or off.*
- void **SetCanBeHit** ()  
*sets CanBeHit variable to true.*
- void **ToggleWindSound** ()  
*Called to turn the wind sound on or off.*

## Private Attributes

- bool **CanBeHit**  
*Variable to decide whether or not this actor can be hit.*
- **SwitchState** **CurrentSwitchState** = Off  
*Current state of the the switch, on or off.*
- **SwitchState** **CurrentSpotlightState** = Off  
*Current state of the light, on or off.*
- **SwitchState** **CurrentWindSoundRight** = Off  
*Current state of the fan in the left room, on or off.*
- **SwitchState** **CurrentWindSoundLeft** = On  
*Current state of the fan in the right room, on or off.*

### 3.1.1 Detailed Description

This trigger is used to turn on and off the boolean in the wind trigger box that turns on and off the wind mechanic.

### 3.1.2 Member Function Documentation

#### 3.1.2.1 ToggleSpotlight()

```
void AActivateWind::ToggleSpotlight ( ) [private]
```

Called to turn the the spotlight on or off.

#### 3.1.2.2 ToggleWind()

```
void AActivateWind::ToggleWind ( ) [private]
```

Called to turn the wind off if it is on.

#### 3.1.2.3 ToggleWindOff()

```
void AActivateWind::ToggleWindOff ( ) [private]
```

Called to turn the wind on if it is off.

#### 3.1.2.4 ToggleWindSound()

```
void AActivateWind::ToggleWindSound ( ) [private]
```

Called to turn the wind sound on or off.

The documentation for this class was generated from the following files:

- ActivateWind.h
- ActivateWind.cpp

## 3.2 ABall Class Reference

The main ball in the game that the player can pick up, throw, summon, and teleport to.

```
#include <Ball.h>
```

Inheritance diagram for ABall:

### Public Member Functions

- [ABall](#) ()  
*Adds static mesh component for the visual aspect, audio component for the crackling sound, and a particle system component to the ball actor.*
- virtual void [Tick](#) (float DeltaTime) override  
*Called every frame.*
- bool [GetCanBeTeleportedTo](#) ()  
*Returns if the Ball can currently be teleported to \reutrn bool the value of CanBeTeleportedTo.*
- void [SetCanBeTeleportedTo](#) (bool CanTeleportTo)  
*Sets if the Ball can currently be teleported to based on the value of CanTeleportTo.*
- bool [GetHasBeenSummonedOnce](#) ()  
*Returns if the Ball has been summoned at least once during the current level.*
- void [SetHasBeenSummonedOnce](#) (bool HasSummoned)  
*Sets the value of bool HasBeenSummoned to HasSummoned.*
- bool [GetCanBallBeSummoned](#) ()  
*Returns if the Ball can currently be summoned by the player.*
- void [SetCanBallBeSummoned](#) (bool CanBeSummoned)  
*sets the value of bool CanBallBeSummoned to CanBeSummoned.*

### Public Attributes

- UStaticMeshComponent \* [SphereVisual](#)  
*Visual element of the ball actor, set in UE4 editor.*
- UParticleSystemComponent \* [SparksParticleSystem](#)  
*Visual sparks the ball emits.*
- class UAudioComponent \* [CrackleSoundPlayer](#)  
*Component for playing the crackling sound the ball makes.*
- class USoundCue \* [CrackleSound](#)  
*Crackling sound the ball makes. Set in UE4 editor.*

### Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Called when the game starts or when spawned, sets CanTeleportToInBeginning. to false.*

## Protected Attributes

- bool [CanTeleportToInBeginning](#)  
*default the ball cannot be telported to in beginning.*
- bool [CanBeTeleportedTo](#)  
*Indicates if the ball can currently be teleported to.*
- bool [HasBeenSummoned](#)  
*Indicates if the ball has previously been summoned in this level.*
- bool [CanBallBeSummoned](#)  
*Indicates if the ball can be currently summoned.*

### 3.2.1 Detailed Description

The main ball in the game that the player can pick up, throw, summon, and teleport to.

### 3.2.2 Member Function Documentation

#### 3.2.2.1 BeginPlay()

```
void ABall::BeginPlay ( ) [override], [protected], [virtual]
```

Called when the game starts or when spawned, sets CanTeleportToInBeginning. to false.

Sets whether the ball can be teleported at the start of the a level.

#### 3.2.2.2 GetCanBallBeSummoned()

```
bool ABall::GetCanBallBeSummoned ( )
```

Returns if the Ball can currently be summoned by the player.

##### Returns

\* bool the value of CanBallBeSummoned.

#### 3.2.2.3 GetHasBeenSummonedOnce()

```
bool ABall::GetHasBeenSummonedOnce ( )
```

Returns if the Ball has been summoned at least once during the current level.

##### Returns

bool the value of HasBeenSummoned

#### 3.2.2.4 SetCanBallBeSummoned()

```
void ABall::SetCanBallBeSummoned (
    bool CanBeSummoned )
```

sets the value of bool CanBallBeSummoned to CanBeSummoned.

## Parameters

<i>CanBeSummoned</i>	the new value of CanBallBeSummoned.
----------------------	-------------------------------------

**3.2.2.5 SetCanBeTeleportedTo()**

```
void ABall::SetCanBeTeleportedTo (
    bool CanTeleportTo )
```

Sets if the Ball can currently be teleported to based on the value of CanTeleportTo.

## Parameters

<i>CanTeleportTo</i>	the value of the ability to teleport to the ball at the current time, sets CanBeTeleportedTo to the value of CanTeleportTo.
----------------------	---

**3.2.2.6 SetHasBeenSummonedOnce()**

```
void ABall::SetHasBeenSummonedOnce (
    bool HasSummoned )
```

Sets the value of bool HasBeenSummoned to HasSummoned.

## Parameters

<i>HasSummoned</i>	the new value of HasBeenSummoned.
--------------------	-----------------------------------

The documentation for this class was generated from the following files:

- Ball.h
- Ball.cpp

**3.3 AChangeDialogueTriggerBox Class Reference**

When the player begins overlapping the ChangeDialogueTriggerBox, a new Sound Base is loaded into the audio component in the GolfGameCharacter and played. A delay can be set from the UE4 editor to postpone the playing of the new dialogue for a set number of seconds. The Sound Base will only be played once, then the DialoguePlayed boolean is set to true.

```
#include <ChangeDialogueTriggerBox.h>
```

Inheritance diagram for AChangeDialogueTriggerBox:

## Public Member Functions

- [AChangeDialogueTriggerBox](#) ()  
*Sets DialoguePlayed to false.*
- void [DialoguePlay](#) ()  
*Play dialogue for player.*

## Public Attributes

- class USoundBase \* [Dialogue](#)  
*New Sound Base to be loaded to player and player's audio component for dialogue. Sound Base is selected in the UE4 editor.*
- class [AGolfGameCharacter](#) \* [PlayerForAudio](#)  
*Player selected for which to play the Sound Base for. Player is selected in the UE4 editor.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Called when the game starts or when spawned.*
- virtual void [OverlapBeginAction](#) () override  
*Loads and plays dialogue when overlap begins.*
- virtual void [OverlapEndAction](#) () override  
*Overlap ends. Timer is cleared.*

## Protected Attributes

- FTimerHandle [TimerHandle](#)  
*Timer for delaying the loading and playing of a new dialogue cue.*
- float [TimeToDelayDialogue](#)  
*Amount of time in seconds for the dialogue to be delayed before loading and playing. Amount of time is specified in the UE4 editor.*

## Private Attributes

- bool [DialoguePlayed](#)  
*Set to true when the dialogue is played, only plays once.*

### 3.3.1 Detailed Description

When the player begins overlapping the ChangeDialogueTriggerBox, a new Sound Base is loaded into the audio component in the GolfGameCharacter and played. A delay can be set from the UE4 editor to postpone the playing of the new dialogue for a set number of seconds. The Sound Base will only be played once, then the DialoguePlayed boolean is set to true.

### 3.3.2 Member Function Documentation

#### 3.3.2.1 BeginPlay()

```
void AChangeDialogueTriggerBox::BeginPlay ( ) [override], [protected], [virtual]
```

Called when the game starts or when spawned.

\Macro that sets up the class to support the infrastructure required by the engine.

The documentation for this class was generated from the following files:

- ChangeDialogueTriggerBox.h
- ChangeDialogueTriggerBox.cpp

## 3.4 AChangeMaterialController Class Reference

Class controls the functionality behind the in-game switches. Toggles movement of associated elevator or moving platform, switches material of the controller to represent whether it is on or off, and toggles visibility of an associated light source. The switch can only be hit once per second by the ball as to not have false positive hits.

```
#include <ChangeMaterialController.h>
```

Inheritance diagram for AChangeMaterialController:

### Public Member Functions

- [AChangeMaterialController](#) ()  
*Sets up static mesh component for the visual aspect of the actor. Adds materials for on and off states. Sets up box component for impact of the ball to toggle associated actor properties.*
- virtual void [Tick](#) (float DeltaTime) override  
*Called every frame.*
- void [OnOverlapBegin](#) (class UPrimitiveComponent \*OverlappedComp, class AActor \*OtherActor, class UPrimitiveComponent \*OtherComp, int32 OtherBodyIndex, bool bFromSweep, const FHitResult &SweepResult)  
*Toggles properties when ball overlaps the actor. Sets CanBeHit to false. Toggles associated light's visibility, whether an associated platform is moving and whether an associated elevator can move.*

## Public Attributes

- class UStaticMeshComponent \* [MyMesh](#)  
*Visible mesh representing the actor. Set in UE4 editor.*
- class UMaterial \* [OnMaterial](#)  
*Green material should be selected, represents the switch in the on state. Set in UE4 editor.*
- class UMaterial \* [OffMaterial](#)  
*Red material should be selected, represents the switch in the off state. Set in UE4 editor.*
- class UBoxComponent \* [MyBoxComponent](#)  
*Box component for the overlapping section of the switch, where the ball will make contact and toggle switch properties.*
- class [APlatform\\_Moving](#) \* [AssociatedPlatform](#)  
*Represents the moving platform whose movement is toggled on or off. Associated platform set in UE4 editor.*
- class [ABall](#) \* [Ball](#)  
*The ball that impact the switch to turn it on or off. Specific ball set in UE4 editor.*
- class ARectLight \* [AssociatedRectlight](#)  
*Selected light source to toggle visibility. Set in UE4 editor.*
- class [AElevatorPlatform](#) \* [AssociatedElevator](#)  
*Selected elevator to toggle active or inactive. Set in UE4 editor.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Called when the game starts or when spawned. Sets material to OffMaterial. Sets CanBeHit to true so that is can toggle properties when hit. Sets timer for resetting CanBeHit.*

## Private Types

- enum [SwitchState](#) { [On](#), [Off](#) }  
*enum for switches to internally represent whether they are in an on or off state.*

## Private Member Functions

- void [TogglePlatformMovement](#) ()  
*Toggles a moving platform's movement to on or off.*
- void [ToggleSpotlight](#) ()  
*Toggles visibility of selected light source.*
- void [ToggleElevator](#) ()  
*Toggles a selected elevator to active or inactive.*
- void [SetCanBeHit](#) ()  
*sets CanBeHit variable to true.*
- void [CyclePlatformMovingAudio](#) ()  
*Intended to toggle audio component sound on or off, unfinished.*

## Private Attributes

- SwitchState [CurrentSwitchState](#) = Off  
*Current state of the the switch, on or off.*
- SwitchState [CurrentSpotlightState](#) = Off  
*Current state of the light, on or off.*
- SwitchState [CurrentMovingAudio](#) = Off  
*Current state of the audio component.*
- bool [CanBeHit](#)  
*Whether the switch can currently be hit by the ball to toggle associated actors.*
- FTimerHandle [MemberTimerHandle](#)  
*Timer for when the switch can be hit by the ball.*

### 3.4.1 Detailed Description

Class controls the functionality behind the in-game switches. Toggles movement of associated elevator or moving platform, switches material of the controller to represent whether it is on or off, and toggles visibility of an associated light source. The switch can only be hit once per second by the ball as to not have false positive hits.

### 3.4.2 Constructor & Destructor Documentation

#### 3.4.2.1 AChangeMaterialController()

```
AChangeMaterialController::AChangeMaterialController ( )
```

Sets up static mesh component for the visual aspect of the actor. Adds materials for on and off states. Sets up box component for impact of the ball to toggle associated actor properties.

\Macro that sets up the class to support the infrastructure required by the engine.

The documentation for this class was generated from the following files:

- [ChangeMaterialController.h](#)
- [ChangeMaterialController.cpp](#)

## 3.5 AChangeTeleportToDialogue Class Reference

Loads in new dialogue cue for when the player cannot teleport to the ball.

```
#include <ChangeTeleportToDialogue.h>
```

Inheritance diagram for AChangeTeleportToDialogue:

## Public Member Functions

- virtual void [OverlapBeginAction](#) () override  
*Loads new dialogue cue into player when overlap begins.*
- virtual void [OverlapEndAction](#) () override  
*Overlap ends.*

## Public Attributes

- class USoundBase \* [Dialogue](#)  
*Macro that sets up the class to support the infrastructure required by the engine.*
- class [AGolfGameCharacter](#) \* **Player**

## Additional Inherited Members

### 3.5.1 Detailed Description

Loads in new dialogue cue for when the player cannot teleport to the ball.

### 3.5.2 Member Data Documentation

#### 3.5.2.1 Dialogue

```
class USoundBase* AChangeTeleportToDialogue::Dialogue
```

Macro that sets up the class to support the infrastructure required by the engine.

New dialogue cue to be loaded into the player's audio component for dialogue.

The documentation for this class was generated from the following files:

- ChangeTeleportToDialogue.h
- ChangeTeleportToDialogue.cpp

## 3.6 AElevatorPlatform Class Reference

Class communicates with the ElevatorTrigger trigger box that checks for the presence of the player character and moves up when the character enters the box. If the character exits the box before it reaches the target height, it moves back down to its original position. The associated static mesh, trigger box, and desired speed of movement and height of path can all be set inside the Unreal editor.

```
#include <ElevatorPlatform.h>
```

Inheritance diagram for AElevatorPlatform:

## Public Member Functions

- [AElevatorPlatform](#) ()  
*The class's constructor, which activates the actor's tick function, sets up the static mesh component, and initializes variables.*
- virtual void [Tick](#) (float DeltaTime) override

## Public Attributes

- UStaticMeshComponent \* [Mesh](#)  
*Visible mesh representing the actor. Set in UE4 editor.*
- class [AElevatorTrigger](#) \* [Trigger](#)  
*The trigger box responsible for detecting the presence of the player character and activating the platform's movement accordingly.*
- float [Speed](#)  
*Determines the speed at which the platform can move.*
- float [TargetZ](#)  
*The target height that the platform can rise to.*
- bool [ElevatorActive](#)  
*Boolean values determining whether the elevator is active, whether it should move up or down, and whether it has reached its target height.*
- bool **MoveUp**
- bool **MoveDown**
- bool **ReachedTarget**
- float [OriginalZ](#)  
*The z value obtained from the original location vector of the platform at the start of the game.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Called when the game starts or when spawned. Stores the Z value from the vector containing the initial location of the platform.*

### 3.6.1 Detailed Description

Class communicates with the ElevatorTrigger trigger box that checks for the presence of the player character and moves up when the character enters the box. If the character exits the box before it reaches the target height, it moves back down to its original position. The associated static mesh, trigger box, and desired speed of movement and height of path can all be set inside the Unreal editor.

### 3.6.2 Constructor & Destructor Documentation

#### 3.6.2.1 AElevatorPlatform()

```
AElevatorPlatform::AElevatorPlatform ( )
```

The class's constructor, which activates the actor's tick function, sets up the static mesh component, and initializes variables.

\Macro that sets up the class to support the infrastructure required by the engine.

### 3.6.3 Member Function Documentation

#### 3.6.3.1 Tick()

```
void AElevatorPlatform::Tick (
    float DeltaTime ) [override], [virtual]
```

\ Called every frame. Checks whether the platform should be moving up or down, or if it has reached its target height.

##### Parameters

<i>DeltaTime</i>	The elapsed time since the last tick.
------------------	---------------------------------------

The documentation for this class was generated from the following files:

- ElevatorPlatform.h
- ElevatorPlatform.cpp

## 3.7 AElevatorTrigger Class Reference

Class responsible for communicating to the ElevatorPlatform whether the player character is present.

```
#include <ElevatorTrigger.h>
```

Inheritance diagram for AElevatorTrigger:

### Public Member Functions

- [AElevatorTrigger](#) ()  
The class constructor. Uses helper macros to enable the trigger box to use the functions *OnOverlapBegin* and *OnOverlapEnd*, which make the box execute certain actions whenever an object overlaps or stops overlapping with the box.
- virtual void [Tick](#) (float DeltaTime) override
- void [OnOverlapBegin](#) (class AActor \*OverlappedActor, class AActor \*OtherActor)  
Checks whether the overlapped character is the player character, whether the ElevatorPlatform is active, and then tells the platform to move up.
- void [OnOverlapEnd](#) (class AActor \*OverlappedActor, class AActor \*OtherActor)  
Checks whether the overlapped character is the player character, whether the ElevatorPlatform is active, and then tells the platform to move down.

## Public Attributes

- class [AElevatorPlatform](#) \* [ElevatorPlatform](#)  
*The associated ElevatorPlatform with which the ElevatorTrigger communicates.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Called when the game starts or when spawned.*

### 3.7.1 Detailed Description

Class responsible for communicating to the ElevatorPlatform whether the player character is present.

### 3.7.2 Member Function Documentation

#### 3.7.2.1 BeginPlay()

```
void AElevatorTrigger::BeginPlay ( ) [override], [protected], [virtual]
```

Called when the game starts or when spawned.

\Macro that sets up the class to support the infrastructure required by the engine.

#### 3.7.2.2 OnOverlapBegin()

```
void AElevatorTrigger::OnOverlapBegin (
    class AActor * OverlappedActor,
    class AActor * OtherActor )
```

Checks whether the overlapped character is the player character, whether the ElevatorPlatform is active, and then tells the platform to move up.

##### Parameters

<i>OverlappedActor</i>	A reference to this trigger box, which is being overlapped.
<i>OtherActor</i>	A reference to the actor that overlapped the trigger box.

#### 3.7.2.3 OnOverlapEnd()

```
void AElevatorTrigger::OnOverlapEnd (
```

```
class AActor * OverlappedActor,
class AActor * OtherActor )
```

Checks whether the overlapped character is the player character, whether the ElevatorPlatform is active, and then tells the platform to move down.

#### Parameters

<i>OverlappedActor</i>	A reference to this trigger box, which is being overlapped.
<i>OtherActor</i>	A reference to the actor that overlapped the trigger box.

#### 3.7.2.4 Tick()

```
void AElevatorTrigger::Tick (
    float DeltaTime ) [override], [virtual]
```

\ Called every frame.

#### Parameters

<i>DeltaTime</i>	The elapsed time since the last tick.
------------------	---------------------------------------

The documentation for this class was generated from the following files:

- ElevatorTrigger.h
- ElevatorTrigger.cpp

## 3.8 AGoalTriggerBox Class Reference

A trigger box that indicates if the Ball is in this trigger box or not.

```
#include <GoalTriggerBox.h>
```

Inheritance diagram for AGoalTriggerBox:

## Public Member Functions

- virtual void [OverlapBeginAction](#) () override  
*Disables the ability to teleport and summon the ball when the ball is no longer overlapping this trigger box.*
- virtual void [OverlapEndAction](#) () override  
*Enables the ability to teleport and summon the ball when the ball is no longer overlapping this trigger box.*
- bool [GetIsBallInGoal](#) ()  
*Returns true if the Ball is in the goal trigger box, returns false otherwise.*
- void [SetIsBallInGoal](#) (bool BallInGoal)  
*Sets the value of IsBallInGoal to the value in BallInGoal.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Calls super [BeginPlay\(\)](#) and casts ActorToCheck (from super [GolfGameTriggerBox](#)) to Ball reference.*

## Protected Attributes

- AActor \* [DoorTarget](#)  
*Reference to DoorTarget to open or close if necessary.*
- AActor \* [DoorLight](#)  
*Reference to a door light.*
- AActor \* [GoalLight](#)  
*Reference to a goal light.*
- bool [IsBallInGoal](#)  
*Indicates if the ball is in the goal or not.*

## Private Attributes

- [ABall](#) \* [Ball](#)  
*Reference for the in game ball.*

### 3.8.1 Detailed Description

A trigger box that indicates if the Ball is in this trigger box or not.

Goal trigger box that stops the ball from being summoned or teleported to when overlapped, and allows the ball to be summoned or teleported to when the ball stops overlapping this trigger box.

### 3.8.2 Member Function Documentation

### 3.8.2.1 GetIsBallInGoal()

```
bool AGoalTriggerBox::GetIsBallInGoal ( )
```

Returns true if the Ball is in the goal trigger box, returns false otherwise.

#### Returns

bool the value of whether or not the ball is overlapping this trigger box

### 3.8.2.2 SetIsBallInGoal()

```
void AGoalTriggerBox::SetIsBallInGoal (
    bool BallInGoal )
```

Sets the value of IsBallInGoal to the value in BallInGoal.

#### Parameters

<i>BallInGoal</i>	the new value to set IsBallInGoal to
-------------------	--------------------------------------

The documentation for this class was generated from the following files:

- GoalTriggerBox.h
- GoalTriggerBox.cpp

## 3.9 AGolfGameCharacter Class Reference

GolfGameCharacter houses all functionality for a user to operate a player in-game.

```
#include <GolfGameCharacter.h>
```

Inheritance diagram for AGolfGameCharacter:

## Classes

- struct [FTouchData](#)

## Public Member Functions

- [AGolfGameCharacter](#) ()  
*Macro that sets up the class to support the infrastructure required by the engine.*
- FORCEINLINE class UCameraComponent \* [GetFirstPersonCameraComponent](#) () const  
*Returns FirstPersonCameraComponent subobject.*
- void [PlayDialogueCue](#) ()  
*current dialogue cue for the player in the audio component for dialogue*
- void [PlayMusicCue](#) ()  
*Plays the current music cue for the player in the audio component for music.*
- void [AdjustMusicVolumeUp](#) ()  
*Adjusts volume up when dialogue cue ends, not used.*
- void [AdjustMusicVolumeDown](#) ()  
*Adjusts volume down when dialogue cue starts, not used.*
- void [ChangeDialogueCue](#) (USoundBase \*NewDialogue)  
*Swaps out old dialogue cue for new cue when overlapping a dialogue change trigger box.*
- void [ChangeMusicCue](#) (USoundBase \*NewMusic)  
*Swaps out old music cue for new cue when overlapping music cue change trigger box.*

## Public Attributes

- class UCameraComponent \* [FirstPersonCameraComponent](#)  
*First person camera.*
- class UGrabThrowComponent \* [GrabberClass](#)  
*Grabber class.*
- class UPhysicsHandleComponent \* [PhysicsHandle](#)  
*PhysicsHandle class.*
- class USphereComponent \* [BallSummonLocation](#)  
*The location to which the ball should be summoned.*
- class [ABall](#) \* [Ball](#)  
*Reference to the in-game ball for picking up, throwing, dropping, summoning, and teleporting to.*
- class UAudioComponent \* [DialoguePlayer](#)  
*Audio component attached to the player to play dialogue cues.*
- class UAudioComponent \* [MusicPlayer](#)  
*Audio component attached to the player to play music cues.*
- class USoundBase \* [CurrentMusicCue](#)  
*Current sound base for music.*
- class USoundBase \* [CannotSummonBallCue](#)  
*Current dialogue cue for when the ball cannot be summoned.*
- float [BaseTurnRate](#)  
*Base turn rate, in deg/sec. Other scaling may affect final turn rate.*
- float [BaseLookUpRate](#)  
*Base look up/down rate, in deg/sec. Other scaling may affect final rate.*
- float [BaseSpeed](#)  
*The regular walking speed of the character.*
- float [RunningSpeed](#)  
*The running speed of the character.*
- FVector [CameraPosition](#)  
*The position of the camera relative to the golf game character.*
- class USoundBase \* [NeedToTeleportBallCue](#)

- Current sound cue for when the player cannot be teleported to the ball. Selected in UE4 editor.*
  - class USoundBase \* [TeleportSound](#)
- Current sound cue for when the player is teleported to the ball. Selected in UE4 editor.*
  - class USoundBase \* [SummonSound](#)
- Current sound cue for when the player summons the ball. Selected in UE4 editor.*

## Protected Member Functions

- void [BeginPlay](#) () override
  - Called when the game starts or when spawned.*
- void [MoveForward](#) (float Value)
- void [MoveRight](#) (float Value)
  - Moves the character to the left or the right.*
- void [GrabOrRelease](#) ()
  - Based on whether the character is currently holding an object, this method tries to either pick up an object in front of the character or drop the one currently being held.*
- void [MouseDown](#) ()
  - If the character is holding an object, this method tries to throw the object in the direction the character is facing.*
- void [Walk](#) ()
  - Toggles the character's movement speed to the base walking speed.*
- void [Sprint](#) ()
  - Toggles the character's moving speed to the running speed.*
- void [TurnAtRate](#) (float Rate)
  - Called via input to turn at a given rate.*
- void [LookUpAtRate](#) (float Rate)
  - Called via input to turn look up/down at a given rate.*
- void [Tick](#) (float DeltaTime) override
- void [SetupPlayerInputComponent](#) (UInputComponent \*PlayerInputComponent) override
- void [Teleport](#) ()
  - Attempts to set the player's location to the ball's location.*
- void [SummonBall](#) ()
  - Attempts to set the ball's location to the player's location and has the player hold the ball if successful.*

## Protected Attributes

- [FTouchData](#) TouchItem

## Private Attributes

- class USoundBase \* [CurrentDialogueCue](#)
  - Current sound cue for dialogue.*

### 3.9.1 Detailed Description

GolfGameCharacter houses all functionality for a user to operate a player in-game.

GolfGameCharacter encapsulates a camera component for the player to view the game from, a GrabThrow component to interact with the ball (pick up, drop, and throw), audio components for playing in-game music and dialogue cues, the ability to summon the ball and teleport to it, as well as necessary components for in-game operations.

## 3.9.2 Constructor & Destructor Documentation

### 3.9.2.1 AGolfGameCharacter()

```
AGolfGameCharacter::AGolfGameCharacter ( )
```

Macro that sets up the class to support the infrastructure required by the engine.

Sets default values for this character's properties

## 3.9.3 Member Function Documentation

### 3.9.3.1 LookUpAtRate()

```
void AGolfGameCharacter::LookUpAtRate (
    float Rate ) [protected]
```

Called via input to turn look up/down at a given rate.

#### Parameters

<i>Rate</i>	This is a normalized rate, i.e. 1.0 means 100% of desired turn rate
-------------	---

### 3.9.3.2 MoveForward()

```
void AGolfGameCharacter::MoveForward (
    float Value ) [protected]
```

\ Moves the character forward or backward.

#### Parameters

<i>Value</i>	The value used for determining the rate at which the character moves.
--------------	---

### 3.9.3.3 MoveRight()

```
void AGolfGameCharacter::MoveRight (
    float Value ) [protected]
```

Moves the character to the left or the right.

## Parameters

<i>Value</i>	The value used for determining the rate at which the character moves.
--------------	---

**3.9.3.4 SetupPlayerInputComponent()**

```
void AGolfGameCharacter::SetupPlayerInputComponent (
    UInputComponent * PlayerInputComponent ) [override], [protected]
```

\ Sets up the inputs usable by the character.

## Parameters

<i>PlayerInputComponent</i>	The component belonging to the player character that allows the use of inputs.
-----------------------------	--

**3.9.3.5 Tick()**

```
void AGolfGameCharacter::Tick (
    float DeltaTime ) [override], [protected]
```

\ Called every frame.

## Parameters

<i>DeltaTime</i>	The elapsed time since the last tick.
------------------	---------------------------------------

**3.9.3.6 TurnAtRate()**

```
void AGolfGameCharacter::TurnAtRate (
    float Rate ) [protected]
```

Called via input to turn at a given rate.

## Parameters

<i>Rate</i>	This is a normalized rate, i.e. 1.0 means 100% of desired turn rate
-------------	---

The documentation for this class was generated from the following files:

- GolfGameCharacter.h
- GolfGameCharacter.cpp

## 3.10 AGolfGameGameModeBase Class Reference

Class generated by Ue4 when the project was created. Not directly utilized.

```
#include <GolfGameGameModeBase.h>
```

Inheritance diagram for AGolfGameGameModeBase:

### Public Member Functions

- void **EndGame** ()
- void **LevelComplete** ()
- void **LoadNextLevel** ()

### Private Member Functions

- void **BeginPlay** () override
- void **CheckLevel** ()

### Private Attributes

- TArray< FString > **Levels**
- APlayerController \* **Controller**
- int32 **CurrentLevel**
- FString **NextLevel**

#### 3.10.1 Detailed Description

Class generated by Ue4 when the project was created. Not directly utilized.

The documentation for this class was generated from the following files:

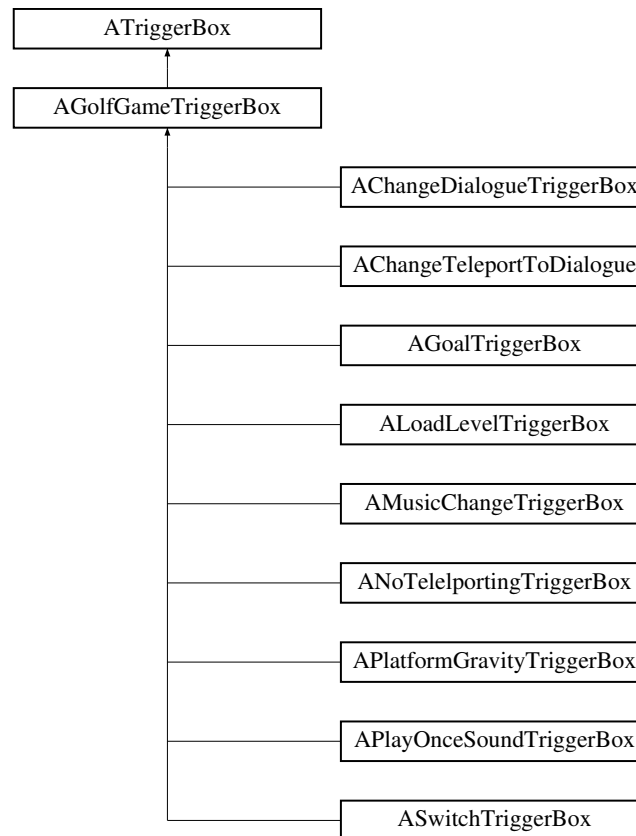

- GolfGameGameModeBase.h
- GolfGameGameModeBase.cpp

### 3.11 AGolfGameTriggerBox Class Reference

Abstract trigger box that calls a method when a specific actor begins or stops overlapping this trigger box.

```
#include <GolfGameTriggerBox.h>
```

Inheritance diagram for AGolfGameTriggerBox:

#### Public Member Functions

- [AGolfGameTriggerBox](#) ()  
*Binds the function `OnOverlapBegin` to the delegate `OnActorBeginOverlap` and the function `OnOverlapEnd` to the delegate `OnActorEndOverlap`.*
- void [OnOverlapBegin](#) (class AActor \*OverlappedActor, class AActor \*OtherActor)  
*Checks to see if the Actor beginning to overlap is the Actor referenced in ActorToCheck the function to call is handled in the subclass.*
- void [OnOverlapEnd](#) (class AActor \*OverlappedActor, class AActor \*OtherActor)  
*Checks to see if the Actor ending the overlap is the Actor referenced in ActorToCheck the function to call is handled in the subclass.*

#### Protected Attributes

- AActor \* [ActorToCheck](#)  
*Reference to the Actor that must be set to determine if said Actor is overlapping this class or not.*

### 3.11.1 Detailed Description

Abstract trigger box that calls a method when a specific actor begins or stops overlapping this trigger box.

### 3.11.2 Member Function Documentation

#### 3.11.2.1 OnOverlapBegin()

```
void AGolfGameTriggerBox::OnOverlapBegin (
    class AActor * OverlappedActor,
    class AActor * OtherActor )
```

Checks to see if the Actor beginning to overlap is the Actor referenced in ActorToCheck the function to call is handled in the subclass.

##### Parameters

<i>OverlappedActor</i>	required param in FActorBeginOverlapSignature delegate.
<i>OtherActor</i>	the actor that overlaps this trigger box.

#### 3.11.2.2 OnOverlapEnd()

```
void AGolfGameTriggerBox::OnOverlapEnd (
    class AActor * OverlappedActor,
    class AActor * OtherActor )
```

Checks to see if the Actor ending the overlap is the Actor referenced in ActorToCheck the function to call is handled in the subclass.

##### Parameters

<i>OverlappedActor</i>	required param in FActorBeginOverlapSignature delegate.
<i>OtherActor</i>	the actor that has stopped overlapping this trigger box.

The documentation for this class was generated from the following files:

- GolfGameTriggerBox.h
- GolfGameTriggerBox.cpp

## 3.12 AHideShowActorSwitch Class Reference

Switches a list of actors on and off.

```
#include <HideShowActorSwitch.h>
```

Inheritance diagram for AHideShowActorSwitch:

## Public Member Functions

- virtual void [ActionOn](#) () override  
*The action that will be preformed when this switch is switched on, determined by the "On" variable.*
- virtual void [ActionOff](#) () override  
*The action that will be preformed when this switch is switched off, determined by the "Off" variable.*
- virtual uint8 [GetActionOff](#) () override  
*Returns the "Off" variable.*
- virtual uint8 [GetActionOn](#) () override  
*Returns the "On" variable.*
- virtual void [SetActionOn](#) (uint8 Status) override  
*Sets the "On" variable.*
- virtual void [SetActionOff](#) (uint8 Status) override  
*Sets the "Off" variable.*

## Protected Member Functions

- void [HideActors](#) (bool Show)  
*Hides the actors in the ActorsToShowHide array if Show is true, otherwise shows the actors.*
- void [FlickerInAndOut](#) ()  
*Iterates over the FlickerPattern array at a rate based on the FlickerRate variable.*
- virtual void [BeginPlay](#) () override  
*Called when the game starts or when spawned, initializes some fields.*

## Protected Attributes

- ActorHideShowStatus [On](#)  
*Indicates what action to preform when this class is switched on: hide, show, or flicker actors.*
- ActorHideShowStatus [Off](#)  
*Indicates what action to preform when this class is switched off: hide, show, or flicker actors.*
- TArray< AActor \* > [ActorsToShowHide](#)  
*Holds a list of actors to be switch on and off.*
- TArray< ActorHideShowStatus > [FlickerPattern](#)  
*An array that holds the pattern that will be flickered.*
- int [TimeHidden](#)  
*Indicates the time the actor will spend hidden when flickering in and out.*
- int [TimeShown](#)  
*Indicates the time the actor will spend shown when flickering in and out.*
- float [TimeFlickering](#)  
*Indicates the time the actor will spend flickering when flickering in and out.*
- float [FlickerRate](#)  
*Indicates how often the FlickerInAndOut method will be called.*

## Private Member Functions

- void [IncrementFlickerIndex](#) ()  
*Increments the index of the FlickerPattern array.*
- void [SetCurrentRunTime](#) ()  
*Sets CurrentRunTime based on the FlickerIndex value.*
- virtual void [GetMethodToCall](#) (uint8 Status) override  
*Gets the method to call when this switch is switched on or off. The method to call is determined by the Status.*

## Private Attributes

- int [CurrentRunTime](#)  
*Indicates how long the current index of the FlickerPattern should run.*
- bool [FirstTimeFlickerCalled](#)  
*Indicates if this is the first time the FlickerInAndOut method has been called.*
- bool [HasBeenIncremented](#)  
*Indicates if the index of FlickerPattern has already been incremented during the indexes run time.*
- int [FlickerIndex](#)  
*The index of the FlickerPattern.*
- int [LastCalled](#)  
*The last time the world time was called, used to determine the Timer time and reset it.*
- int [Timer](#)  
*Indicates how long the current FlickerPattern index has been running.*
- bool [AreActorsHidden](#)  
*Indicates whether the actors are hidden or not.*

## Additional Inherited Members

### 3.12.1 Detailed Description

Switches a list of actors on and off.

An actor switch that contains an array of actors and preforms an action when turned off or on. The actions that can be preformed include: hide, show, flicker actors, or do nothing. When turned off or on, the array is iterated over and the defined "On" or "Off" action is preformed on all actors in the array.

### 3.12.2 Member Function Documentation

#### 3.12.2.1 GetActionOff()

```
uint8 AHideShowActorSwitch::GetActionOff ( ) [override], [virtual]
```

Returns the "Off" variable.

#### Returns

uint8 value of the "Off" variable.

### 3.12.2.2 GetActionOn()

```
uint8 AHideShowActorSwitch::GetActionOn ( ) [override], [virtual]
```

Returns the "On" variable.

#### Returns

uint8 value of the "On" variable.

### 3.12.2.3 GetMethodToCall()

```
void AHideShowActorSwitch::GetMethodToCall (
    uint8 Status ) [override], [private], [virtual]
```

Gets the method to call when this switch is switched on or off. The method to call is determined by the Status.

#### Parameters

<i>Status</i>	the GolfGameEnum that determines what method to call.
---------------	---

### 3.12.2.4 HideActors()

```
void AHideShowActorSwitch::HideActors (
    bool Show ) [protected]
```

Hides the actors in the ActorsToShowHide array if Show is true, otherwise shows the actors.

#### Parameters

<i>Show</i>	will hide actors if true, will show if false.
-------------	---

### 3.12.2.5 SetActionOff()

```
void AHideShowActorSwitch::SetActionOff (
    uint8 Status ) [override], [virtual]
```

Sets the "Off" variable.

#### Parameters

<i>Status</i>	the GolfGameEnum that will be the new value of the "Off" variable.
---------------	--

### 3.12.2.6 SetActionOn()

```
void AHideShowActorSwitch::SetActionOn (
    uint8 Status ) [override], [virtual]
```

Sets the "On" variable.

#### Parameters

<i>Status</i>	the GolfGameEnum that will be the new value of the "On" variable.
---------------	---

The documentation for this class was generated from the following files:

- HideShowActorSwitch.h
- HideShowActorSwitch.cpp

## 3.13 ALightSwitch Class Reference

Switches a list of lights on and off.

```
#include <LightSwitch.h>
```

Inheritance diagram for ALightSwitch:

### Public Member Functions

- virtual void [ActionOn](#) () override  
*The action that will be preformed when this switch is switched on, determined by the "On" variable.*
- virtual void [ActionOff](#) () override  
*The action that will be preformed when this switch is switched off, determined by the "Off" variable.*
- virtual uint8 [GetActionOff](#) () override  
*Returns the "Off" variable.*
- virtual uint8 [GetActionOn](#) () override  
*Returns the "On" variable.*
- virtual void [SetActionOn](#) (uint8 Status) override  
*Sets the "On" variable.*
- virtual void [SetActionOff](#) (uint8 Status) override  
*Sets the "Off" variable.*

## Protected Member Functions

- void [FlickerLights](#) ()  
*Flickers the lights.*
- void [DimLights](#) (float DimVar)  
*Dims the lights to the light intensity based on the variable DimVar.*
- void [HideLights](#) (bool Show)  
*Hides the lights in the Lights array if Show is true, otherwise shows the Lights.*

## Protected Attributes

- LightStatus [On](#)  
*Indicates what action to preform when this class is switched on: hide, show, flicker, dim lights, or do nothing.*
- LightStatus [Off](#)  
*Indicates what action to preform when this class is switched off: hide, show, flicker, dim lights, or do nothing.*
- float [FlickerRate](#)  
*Indicates the rate at which the lights will flicker.*
- float [FlickerBrighten](#)  
*The max value to increase the light brightness to when flickering.*
- float [FlickerDim](#)  
*The min value to decrease the light brightness to when flickering.*
- float [Dim](#)  
*The value of the light brightness to decrease the lights to.*
- TArray< ALight \* > [Lights](#)  
*The array of lights for this light switch.*

## Private Member Functions

- virtual void [GetMethodToCall](#) (uint8 Status) override  
*Gets the method to call when this switch is switched on or off.*

## Private Attributes

- bool [AreLightsHidden](#)  
*Indicates if the lights are currently hidden (off) or not.*
- bool [AreLightsDimmed](#)  
*Indicates if the lights are currently dimmed or not.*

## Additional Inherited Members

### 3.13.1 Detailed Description

Switches a list of lights on and off.

A light switch that contains an array of lights and preforms an action when turned off or on. The actions that can be preformed include : hide, show, flicker, dim lights, or do nothing. When turned off or on, the array is iterated over and the defined "On" or "Off" action is preformed on all lights in the array.

### 3.13.2 Member Function Documentation

#### 3.13.2.1 DimLights()

```
void ALightSwitch::DimLights (
    float DimVar ) [protected]
```

Dims the lights to the light intensity based on the variable DimVar.

##### Parameters

<i>DimVar</i>	the new light intensity to set the lights to.
---------------	---

#### 3.13.2.2 FlickerLights()

```
void ALightSwitch::FlickerLights ( ) [protected]
```

Flickers the lights.

[FlickerLights\(\)](#) will switch between changing the light intensity to [FlickerBrighten](#) and [FlickerDim](#) at a rate based on the [FlickerRate](#).

#### 3.13.2.3 GetActionOff()

```
uint8 ALightSwitch::GetActionOff ( ) [override], [virtual]
```

Returns the "Off" variable.

##### Returns

uint8 value of the "Off" variable

#### 3.13.2.4 GetActionOn()

```
uint8 ALightSwitch::GetActionOn ( ) [override], [virtual]
```

Returns the "On" variable.

##### Returns

uint8 value of the "On" variable.

#### 3.13.2.5 GetMethodToCall()

```
void ALightSwitch::GetMethodToCall (
    uint8 Status ) [override], [private], [virtual]
```

Gets the method to call when this switch is switched on or off.

The method to call is determined by the Status UEnum. The method will either call [Flicker\(\)](#), [HideLights\(bool Show\)](#), or [DimLights\(float DimVar\)](#) depending on the UEnum passed.

## Parameters

<i>Status</i>	the GolfGameEnum that determines what method to call.
---------------	---

**3.13.2.6 HideLights()**

```
void ALightSwitch::HideLights (
    bool Show ) [protected]
```

Hides the lights in the Lights array if Show is true, otherwise shows the Lights.

## Parameters

<i>Show</i>	will hide the Lights if true, will show Lights if false.
-------------	--

**3.13.2.7 SetActionOff()**

```
void ALightSwitch::SetActionOff (
    uint8 Status ) [override], [virtual]
```

Sets the "Off" variable.

## Parameters

<i>Status</i>	the GolfGameEnum that will be the new value of the "Off" variable.
---------------	--

**3.13.2.8 SetActionOn()**

```
void ALightSwitch::SetActionOn (
    uint8 Status ) [override], [virtual]
```

Sets the "On" variable.

## Parameters

<i>Status</i>	the GolfGameEnum that will be the new value of the "On" variable.
---------------	---

The documentation for this class was generated from the following files:

- LightSwitch.h
- LightSwitch.cpp

## 3.14 ALoadLevelTriggerBox Class Reference

Trigger box that loads the next level when overlapped.

```
#include <LoadLevelTriggerBox.h>
```

Inheritance diagram for ALoadLevelTriggerBox:

### Public Member Functions

- void [LevelLoad](#) ()  
*Loads the level specified by LevelToLoad.*
- virtual void [OverlapBeginAction](#) () override  
*Sets IsCharacterInTriggerBox to true once the ActorToCheck overlaps this trigger box.*

### Protected Attributes

- bool [RollCredits](#)  
*Macro that sets up the class to support the infrastructure required by the engine.*
- float [LevelLoadTimeDelay](#)  
*The amount of time to wait for the next level to load.*
- FName [LevelToLoad](#)  
*The name of the next level to load.*
- bool [IsCharacterInTrigger](#)  
*Indicates whether the ActorToCheck is in the trigger box or not.*

### Private Member Functions

- virtual void [OverlapEndAction](#) () override  
*Inherited method that is not implemented.*

#### 3.14.1 Detailed Description

Trigger box that loads the next level when overlapped.

Abstract trigger box that loads the designated next level when overlapped by the referenced ActorToCheck (from super GolfGameTriggerBox).

### 3.14.2 Member Data Documentation

#### 3.14.2.1 RollCredits

```
bool ALoadLevelTriggerBox::RollCredits [protected]
```

Macro that sets up the class to support the infrastructure required by the engine.

Determines if end credits should play or the loading screen.

The documentation for this class was generated from the following files:

- LoadLevelTriggerBox.h
- LoadLevelTriggerBox.cpp

## 3.15 AMusicChangeTriggerBox Class Reference

When a specific actor begins to overlap MusicChangeTriggerBox, a selected Sound Base is loaded into the audio component for music in the GolfGameCharacter and played.

```
#include <MusicChangeTriggerBox.h>
```

Inheritance diagram for AMusicChangeTriggerBox:

### Public Member Functions

- [AMusicChangeTriggerBox](#) ()  
*Stock constructor.*
- virtual void [OverlapBeginAction](#) () override  
*Upon beginning the overlap, the new music cue is loaded to the player and is played.*
- virtual void [OverlapEndAction](#) () override  
*Trigger box overlap end.*

### Public Attributes

- class USoundBase \* [Music](#)  
*Sound base for current music cue. Set in UE4 editor.*
- class [AGolfGameCharacter](#) \* [PlayerForAudio](#)  
*Reference to the player so that the new music cue can be loaded into the audio component for music. Set in UE4 editor.*

## Protected Member Functions

- virtual void `BeginPlay` () override  
*Macro that sets up the class to support the infrastructure required by the engine.*

## Private Attributes

- bool `MusicStarted` = false  
*Represents whether the music cue has already been loaded and played.*

## Additional Inherited Members

### 3.15.1 Detailed Description

When a specific actor begins to overlap `MusicChangeTriggerBox`, a selected Sound Base is loaded into the audio component for music in the `GolfGameCharacter` and played.

### 3.15.2 Member Function Documentation

#### 3.15.2.1 `BeginPlay()`

```
void AMusicChangeTriggerBox::BeginPlay ( ) [override], [protected], [virtual]
```

Macro that sets up the class to support the infrastructure required by the engine.

Called when the game starts or when spawned.

The documentation for this class was generated from the following files:

- `MusicChangeTriggerBox.h`
- `MusicChangeTriggerBox.cpp`

## 3.16 ANoTeleportingTriggerBox Class Reference

Disables the player from teleporting to the in game ball when it is in this trigger box.

```
#include <NoTeleportingTriggerBox.h>
```

Inheritance diagram for `ANoTeleportingTriggerBox`:

## Public Member Functions

- virtual void [OverlapBeginAction](#) () override  
*Disables the ability to teleport to the ball when the ball overlaps this trigger box.*
- virtual void [OverlapEndAction](#) () override  
*Enables the ability to teleport to the ball when the ball no longer overlaps this trigger box.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Calls super [BeginPlay\(\)](#) and casts ActorToCheck (from super GolfGameTriggerBox) to Ball reference.*

## Private Attributes

- [ABall](#) \* [Ball](#)  
*Reference to the ball in the game.*

## Additional Inherited Members

### 3.16.1 Detailed Description

Disables the player from teleporting to the in game ball when it is in this trigger box.

Trigger box that prevents the player from teleporting to the area this trigger box covers when the ball is overlapping this trigger box. Enables teleportation when the ball is no longer overlapping.

The documentation for this class was generated from the following files:

- NoTeleportingTriggerBox.h
- NoTeleportingTriggerBox.cpp

## 3.17 AOscillatingPlatform Class Reference

Class creates a platform that moves back and forth on the x, y, or z axis. The associated static mesh, amount of pause time on either end of the path, the length of the path, speed of movement, initial direction, and axis of movement can all be set inside the Unreal editor.

```
#include <OscillatingPlatform.h>
```

Inheritance diagram for AOscillatingPlatform:

## Public Member Functions

- [AOscillatingPlatform](#) ()  
*The constructor of the class, which activates the actor's ability to tick, creates a static mesh, and initializes all variables.*
- void [Tick](#) (float DeltaTime) override  
*Called every frame.*

## Public Attributes

- UStaticMeshComponent \* [Mesh](#)  
*Visible mesh representing the actor. Set in UE4 editor.*
- int [PauseTime](#)  
*The time that the platform doesn't move when it reaches either end of its path. Set in UE4 editor.*
- float [PathHeight](#)  
*The length of the platform's path. Set in UE4 editor.*
- float [Speed](#)  
*The speed at which the platform moves. Set in UE4 editor.*
- int [Direction](#)  
*The initial direction that the platform will be moving along its path. Set in UE4 editor.*
- FString [Axis](#)  
*the axis along which the platform moves. Set in UE4 editor.*
- bool [Paused](#)  
*Whether the platform is currently paused.*
- int [CurTime](#)  
*The length of time left for the platform to be paused.*
- float [MaxX](#)  
*Calculated max X value of the platform.*
- float [MaxY](#)  
*Calculated max Y value of the platform.*
- float [MaxZ](#)  
*Calculated max Z value of the platform.*
- float [OriginalX](#)  
*Platform's original X location.*
- float [OriginalY](#)  
*Platform's original Y location.*
- float [OriginalZ](#)  
*Platform's original Z location.*

## Protected Member Functions

- void [BeginPlay](#) () override  
*Called when the game starts or when spawned. Stores the values of the vector of the original location and calculates the max using those values.*

### 3.17.1 Detailed Description

Class creates a platform that moves back and forth on the x, y, or z axis. The associated static mesh, amount of pause time on either end of the path, the length of the path, speed of movement, initial direction, and axis of movement can all be set inside the Unreal editor.

### 3.17.2 Constructor & Destructor Documentation

#### 3.17.2.1 AOscellatingPlatform()

```
AOscellatingPlatform::AOscellatingPlatform ( )
```

The constructor of the class, which activates the actor's ability to tick, creates a static mesh, and initializes all variables.

\Macro that sets up the class to support the infrastructure required by the engine.

The documentation for this class was generated from the following files:

- OscellatingPlatform.h
- OscellatingPlatform.cpp

## 3.18 APlatform\_Assist\_Lift Class Reference

Class representing a continually moving actor in-game, positioned next to the first platform on the final level. Moves up and down to move player back to starting platform.

```
#include <Platform_Assist_Lift.h>
```

Inheritance diagram for APlatform\_Assist\_Lift:

### Public Member Functions

- [APlatform\\_Assist\\_Lift](#) ()  
*Macro that sets up the class to support the infrastructure required by the engine.*
- virtual void [Tick](#) (float DeltaTime) override  
*Called every frame and changes the location of the lift based on delta time.*

### Public Attributes

- UStaticMeshComponent \* [VisualMesh](#)  
*For assist lift static mesh only.*
- float [ScaleFactor](#) = 50.0  
*Factor for which the platform will move in a given direction.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Called when the game starts or when spawned.*

### 3.18.1 Detailed Description

Class representing a continually moving actor in-game, positioned next to the first platform on the final level. Moves up and down to move player back to starting platform.

### 3.18.2 Constructor & Destructor Documentation

#### 3.18.2.1 APlatform\_Assist\_Lift()

```
APlatform_Assist_Lift::APlatform_Assist_Lift ( )
```

Macro that sets up the class to support the infrastructure required by the engine.

Sets default values for this actor's properties.

The documentation for this class was generated from the following files:

- Platform\_Assist\_Lift.h
- Platform\_Assist\_Lift.cpp

## 3.19 APlatform\_Moving Class Reference

Class represents the four moving platforms in the final level. They have the ability to move up / down, left / right, and side / side with a scale factor that effects how far they move.

```
#include <Platform_Moving.h>
```

Inheritance diagram for APlatform\_Moving:

## Public Member Functions

- [APlatform\\_Moving](#) ()  
*Macro that sets up the class to support the infrastructure required by the engine.*
- virtual void [Tick](#) (float DeltaTime) override  
*Called every frame. Sets new location of the moving platform based on delta time.*

## Public Attributes

- UStaticMeshComponent \* [VisualMesh](#)  
*sStatic mesh representing the moving platform.*
- float [ScaleFactor](#) = 50.0  
*Factor for which the platform is to move from its starting location.*
- bool [IsPlatFormMoving](#) = false  
*Is the platform currently in motion.*
- EMovementType [Movement](#) = EMovementType::UpDown  
*Direction of movement for the platform from above enum.*
- class UAudioComponent \* [PlatformMovingAudio](#)  
*Audio component for moving platform, plays sound when platform is moving, not functional.*
- class USoundBase \* [MovingSound](#)  
*Sound played when the platform is in motion.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Sets random starting value.*

## Private Attributes

- int [Random](#)  
*Random integer representing the time since creation so that all platforms do not move at the same pace.*

### 3.19.1 Detailed Description

Class represents the four moving platforms in the final level. They have the ability to move up / down, left /right, and side / side with a scale factor that effects how far they move.

### 3.19.2 Constructor & Destructor Documentation

#### 3.19.2.1 APlatform\_Moving()

```
APlatform_Moving::APlatform_Moving ( )
```

Macro that sets up the class to support the infrastructure required by the engine.

Sets default values for this actor's properties. Sets up static mesh component.

The documentation for this class was generated from the following files:

- Platform\_Moving.h
- Platform\_Moving.cpp

## 3.20 APlatformGravityTriggerBox Class Reference

\*Description: Upon a specific actor overlapping the triggerbox, the world gravity is set to a specified new gravity. The original gravity is then reset upon leaving the trigger box.

```
#include <PlatformGravityTriggerBox.h>
```

Inheritance diagram for APlatformGravityTriggerBox:

### Public Member Functions

- virtual void [OverlapBeginAction](#) () override  
*New world gravity set when specific actor enter trigger box.*
- virtual void [OverlapEndAction](#) () override  
*World gravity returned to original value upon leaving trigger box.*

### Public Attributes

- float [GravityInsideTriggerBox](#)  
*New world gravity upon entering the trigger box.*

### Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Macro that sets up the class to support the infrastructure required by the engine.*

### Private Attributes

- float [OriginalWorldGravity](#)  
*Original world gravity stored before overlap.*

### Additional Inherited Members

#### 3.20.1 Detailed Description

\*Description: Upon a specific actor overlapping the triggerbox, the world gravity is set to a specified new gravity. The original gravity is then reset upon leaving the trigger box.

### 3.20.2 Member Function Documentation

#### 3.20.2.1 BeginPlay()

```
void APlatformGravityTriggerBox::BeginPlay ( ) [override], [protected], [virtual]
```

Macro that sets up the class to support the infrastructure required by the engine.

Called when the game starts or when spawned. Stored world gravity in OriginalWorldGravity.

The documentation for this class was generated from the following files:

- PlatformGravityTriggerBox.h
- PlatformGravityTriggerBox.cpp

## 3.21 APlayOnceSoundTriggerBox Class Reference

Played a specific audio cue at the located specific one time when entering trigger box. The sound cannot be played again.

```
#include <PlayOnceSoundTriggerBox.h>
```

Inheritance diagram for APlayOnceSoundTriggerBox:

### Public Member Functions

- virtual void [OverlapBeginAction](#) () override  
*Sound cue is played for player when specific actor enters trigger box.*
- virtual void [OverlapEndAction](#) () override  
*Overlaps of specific actor ends.*

### Public Attributes

- class USoundBase \* [Sound](#)  
*Macro that sets up the class to support the infrastructure required by the engine.*

## Private Attributes

- bool `HasSoundPlayed` = false  
*Set to true when sound has played.*

## Additional Inherited Members

### 3.21.1 Detailed Description

Played a specific audio cue at the located specific one time when entering trigger box. The sound cannot be played again.

### 3.21.2 Member Data Documentation

#### 3.21.2.1 Sound

```
class USoundBase* APlayOnceSoundTriggerBox::Sound
```

Macro that sets up the class to support the infrastructure required by the engine.

Sound to be played one time.

The documentation for this class was generated from the following files:

- PlayOnceSoundTriggerBox.h
- PlayOnceSoundTriggerBox.cpp

## 3.22 ASwitch Class Reference

Abstract class that switches actors on / off.

```
#include <Switch.h>
```

Inheritance diagram for ASwitch:

## Public Attributes

- virtual void virtual GetMethodToCall(uint8 Status) PURE\_VIRTUAL([ASwitch](#) void virtual ActionOn() PURE\_VIRTUAL([ASwitch](#) void virtual ActionOff() PURE\_VIRTUAL([ASwitch](#) uint8 [GetActionOff](#) () PURE\_VIRTUAL([ASwitch](#) AL([ASwitch](#)
  - Gets the method to call when this switch is switched on or off. The method to call is determined by the Status.*
- virtual uint8 [GetActionOn](#) () PURE\_VIRTUAL([ASwitch](#)
  - Returns the "On" variable.*

### 3.22.1 Detailed Description

Abstract class that switches actors on / off.

Ue4 interfaces do not work well, so an abstract class was used

### 3.22.2 Member Data Documentation

#### 3.22.2.1 GetActionOff

```
virtual void virtual GetMethodToCall (uint8 Status) PURE_VIRTUAL(ASwitch void virtual ActionOn () PURE_VIRTUAL(ASwitch void virtual ActionOff () PURE_VIRTUAL(ASwitch uint8 ASwitch::GetActionOff () PURE_VIRTUAL(ASwitch
```

Gets the method to call when this switch is switched on or off. The method to call is determined by the Status.

##### Parameters

<i>Status</i>	the GolfGameEnum that determines what method to call
---------------	--

The action that will be preformed when this switch is switched on, determined by the "On" variable.

The action that will be preformed when this switch is switched off, determined by the "Off" variable.

Returns the "Off" variable.

##### Returns

uint8 value of the "Off" variable.

#### 3.22.2.2 GetActionOn

```
virtual uint8 ASwitch::GetActionOn () PURE_VIRTUAL(ASwitch
```

Returns the "On" variable.

**Returns**

uint8 value of the "On" variable.

The documentation for this class was generated from the following file:

- Switch.h

## 3.23 ASwitchTriggerBox Class Reference

Trigger box that turns a list of switches on/off.

```
#include <SwitchTriggerBox.h>
```

Inheritance diagram for ASwitchTriggerBox:

**Public Member Functions**

- void [SwitchOff](#) ()  
*Iterates through the switches array and turns each switch off.*
- void [SwitchOn](#) ()  
*Iterates through the switches array and turns each switch on.*
- virtual void [OverlapBeginAction](#) () override  
*Determines if this method can only be called once, has already been triggered or if OverlapEndAction has been disabled. Then calls OverlapBeginActionHelper to create the time that calls the SwitchOn method to turn on all switches.*
- virtual void [OverlapEndAction](#) () override  
*Determines if this method can only be called once or has previously been called. Creates the timer that calls the SwitchOff method to turn off all switches. the SwitchOn method.*

**Protected Attributes**

- FTimerHandle [TimerHandleSwitchOn](#)  
*The Timer handle for the Switch On Timer.*
- FTimerHandle [TimerHandleSwitchOff](#)  
*The Timer handle for the Switch Off Timer.*
- TArray< [ASwitch](#) \* > [Switches](#)  
*Array of switches to turn on or off.*
- float [DelayTimeOn](#)  
*The value of the time to wait before turning on the switch after overlap begins.*
- float [DelayTimeOff](#)  
*The value of the time to wait before turning off the switch after overlap ends.*
- bool [CanOnlyBeTriggeredOnce](#)  
*Indicates if this trigger box can only be triggered once or not.*
- bool [DisableOverlapEnd](#)  
*Indicates that the OverlapEndAction will be disabled and instead the off switch will execute, with the delay determined by DelayTimeOff, right after SwitchOn finishes executing.*

## Private Member Functions

- void [OverlapBeginActionHelper](#) ()  
*Helper method for OverlapBeginAction that creates the timer for [SwitchOn\(\)](#).*

## Private Attributes

- bool [HasPreviouslyBeenTriggeredBegin](#)  
*Indicates if this trigger box has been previously overlapped by ActorToCheck.*
- bool [HasPreviouslyBeenTriggeredEnd](#)  
*Indicates if this trigger box has been previously stopped being overlapped by ActorToCheck.*

### 3.23.1 Detailed Description

Trigger box that turns a list of switches on/off.

Triggerbox for any subclass that extends Switch.Holds an array of switches and when overlapped will flip the switches in the array on, when overlap ends flips the switches off.

The documentation for this class was generated from the following files:

- SwitchTriggerBox.h
- SwitchTriggerBox.cpp

## 3.24 AWindTriggerBox Class Reference

A trigger box that once the ball enters the overlap area, a force is added directly to the ball every .1 seconds resulting in a wind like mechanic.

```
#include <WindTriggerBox.h>
```

Inheritance diagram for AWindTriggerBox:

## Public Member Functions

- virtual void [Tick](#) ()  
*Function for the timer tick and what happens in it.*
- void [AddForce](#) (class AActor \*OverlappedActor, class AActor \*OtherActor)  
*Function for adding the force the the ball during the tick.*
- void [OnOverlapBegin](#) (class AActor \*OverlappedActor, class AActor \*OtherActor)  
*Function of when the ball enters the box.*
- void [OnOverlapEnd](#) (class AActor \*OverlappedActor, class AActor \*OtherActor)  
*Function of when the ball exits the box.*

## Public Attributes

- class [ABall](#) \* [Ball](#)  
*The ball that impact the switch to turn it on or off. Specific ball set in UE4 editor.*
- int [force](#) = 1000  
*Integer force to be added to the ball when add force is applied.*
- bool [IsTriggered](#) = false  
*Boolean to tell the trigger box whether or not wind has to be activated or not.*
- bool [IsUsable](#)  
*Boolean to tell the wind trigger box to turn on or not (can be accessed by a blueprint).*

## Protected Member Functions

- virtual void **BeginPlay** () override

## Protected Attributes

- FTimerHandle [InputADelayManager](#)  
*Handles the delay for the tick.*

## Private Attributes

- bool [WindOn](#)  
*Boolean to tell the wind trigger box on whether or not the wind is currently on.*
- FVector [cameraForward](#)  
*Vector of where the wind should point.*
- FTimerHandle [loopHandle](#)  
*Handler for the wind tick.*
- UStaticMeshComponent \* [meshRootComp](#)  
*Mesh for inherited ball object.*

### 3.24.1 Detailed Description

A trigger box that once the ball enters the overlap area, a force is added directly to the ball every .1 seconds resulting in a wind like mechanic.

The documentation for this class was generated from the following files:

- WindTriggerBox.h
- WindTriggerBox.cpp

### 3.25 AGolfGameCharacter::FTouchData Struct Reference

#### Public Attributes

- bool **bIsPressed**
- ETouchIndex::Type **FingerIndex**
- FVector **Location**
- bool **bMoved**

The documentation for this struct was generated from the following file:

- GolfGameCharacter.h

### 3.26 UGrabThrowComponent Class Reference

This class is a component of the player character that allows the character to pick up, drop, and throw objects.

```
#include <GrabThrowComponent.h>
```

Inheritance diagram for UGrabThrowComponent:

#### Public Member Functions

- [UGrabThrowComponent\(\)](#)  
*Sets default values for this component's properties.*
- virtual void [TickComponent](#) (float DeltaTime, ELevelTick TickType, FActorComponentTickFunction \*ThisTickFunction) override  
*Called every frame.*
- bool [Grab](#) (UObject \*WorldContextObject, class UPhysicsHandleComponent \*Ph, UCameraComponent \*FPCameraComponent)  
*Attempts to grab an object of the appropriate type and within the appropriate distance in front of the player character.*
- bool [Throw](#) (class UPhysicsHandleComponent \*Ph, UCameraComponent \*FPCameraComponent)  
*Attempts to throw an object held by the player character.*
- bool [Release](#) (class UPhysicsHandleComponent \*Ph, bool bThrow)  
*Attempts to release an object held by the player character.*
- void [TraceHandleLocation](#) (class UPhysicsHandleComponent \*Ph, UCameraComponent \*FPCameraComponent)  
*Traces the location of the physics handle related to the position of the player character's camera.*
- void [SummonGrabBall](#) (ABall \*Ball, FVector SummonLocation, UPhysicsHandleComponent \*Ph)  
*Summons the ball to the player and sets the ball to grabbed by the player.*
- FORCEINLINE bool [GetIsObjectHeld](#) () const  
*Returns if an object is currently being held.*

## Protected Member Functions

- virtual void [BeginPlay](#) () override  
*Called when the game starts or when spawned.*

## Private Attributes

- FVector [HandleLocation](#)  
*Physics handle destination.*
- TArray< TEnumAsByte< EObjectTypeQuery > > [PhysicsObjectType](#)  
*Type of object that can be picked up.*
- TArray< AActor \* > [ActorsToIgnore](#)  
*A list of actors to ignore when attempting to grab objects.*
- UPrimitiveComponent \* [HitComponent](#)  
*Cached reference to the hit component.*
- class USoundBase \* [GrabSound](#)  
*Sound for when the object is grabbed.*
- class USoundBase \* [ThrowSound](#)  
*Sound for when the object is thrown.*
- class USoundBase \* [ReleaseSound](#)  
*Sound for when the object is released.*
- bool [bObjectHeld](#)  
*Checks if object is being held.*
- bool [bPhysicsHandleActive](#)  
*Check if physics handle is active.*
- float [MinGrabDist](#) = 300.0f  
*Min distance to allow pickup.*
- float [MaxGrabDist](#) = 1500.0f  
*Max distance to allow pickup.*
- float [PlayerObjectDist](#) = 1.0f  
*Distance between player and pickup.*
- float [ThrowingForce](#) = 1500.0f  
*The amount of force used to throw the object.*
- float [SnapDistance](#) = 200.0f  
*The distance from the character that an object will snap to when grabbed or summoned.*

### 3.26.1 Detailed Description

This class is a component of the player character that allows the character to pick up, drop, and throw objects.

### 3.26.2 Member Function Documentation

#### 3.26.2.1 Grab()

```
bool UGrabThrowComponent::Grab (
    UObject * WorldContextObject,
    class UPhysicsHandleComponent * Ph,
    UCameraComponent * FPCameraComponent )
```

Attempts to grab an object of the appropriate type and within the appropriate distance in front of the player character.

## Parameters

<i>WorldContextObject</i>	A reference to the player character.
<i>Ph</i>	A reference to the player character's physics handle.
<i>FPCameraComponent</i>	A reference to the player character's camera component.

### 3.26.2.2 Release()

```
bool UGrabThrowComponent::Release (  
    class UPhysicsHandleComponent * Ph,  
    bool bThrow )
```

Attempts to release an object held by the player character.

## Parameters

<i>Ph</i>	A reference to the player character's physics handle
<i>bThrow</i>	a boolean signifying whether a throw has been performed

### 3.26.2.3 SummonGrabBall()

```
void UGrabThrowComponent::SummonGrabBall (  
    ABall * Ball,  
    FVector SummonLocation,  
    UPhysicsHandleComponent * Ph )
```

Summons the ball to the player and sets the ball to grabbed by the player.

## Parameters

<i>Ball</i>	the in game ball that the player references.
<i>SummonLocation</i>	the location that the ball will be summoned to respective to the player and their grab position.
<i>Ph</i>	the players physics handle that aids in holding and moving the ball.

### 3.26.2.4 Throw()

```
bool UGrabThrowComponent::Throw (  
    class UPhysicsHandleComponent * Ph,  
    UCameraComponent * FPCameraComponent )
```

Attempts to throw an object held by the player character.

## Parameters

<i>Ph</i>	A reference to the player character's physics handle.
<i>FPCameraComponent</i>	A reference to the player character's camera component.

**3.26.2.5 TraceHandleLocation()**

```
void UGrabThrowComponent::TraceHandleLocation (
    class UPhysicsHandleComponent * Ph,
    UCameraComponent * FPCameraComponent )
```

Traces the location of the physics handle related to the position of the player character's camera.

## Parameters

<i>Ph</i>	A reference to the player character's physics handle.
<i>FPCameraComponent</i>	A reference to the player character's camera component.

**3.26.3 Member Data Documentation****3.26.3.1 HandleLocation**

```
FVector UGrabThrowComponent::HandleLocation [private]
```

Physics handle destination.

\Macro that sets up the class to support the infrastructure required by the engine.

- 

**3.26.3.2 SnapDistance**

```
float UGrabThrowComponent::SnapDistance = 200.0f [private]
```

The distance from the character that an object will snap to when grabbed or summoned.

- 

The documentation for this class was generated from the following files:

- GrabThrowComponent.h
- GrabThrowComponent.cpp

## 3.27 UMovementType Class Reference

Generated by Ue4, not directly utilized.

```
#include <MovementType.h>
```

Inheritance diagram for UMovementType:

### 3.27.1 Detailed Description

Generated by Ue4, not directly utilized.

The documentation for this class was generated from the following file:

- MovementType.h
